Session PowerTools
Powerful Pro Tools session manipulation tools

DETAILED PRODUCT SUMMARY

SESSION MANAGEMENT

SessionBrowser™ offers users a unique tool for analysing and processing multiple Pro Tools session files. The software allows users to quickly 'unwrap' Pro Tools sessions into a clear browser where media usage, drive dependency and other such factors can be determined without even booting Pro Tools. The simple user interface allows you to drag and drop session files, then 'click' to reveal the sessions contents, Pro Tools regions and dependent sound files.

You can even identify the required media to open the session. In an environment where it is not uncommon to spread a large session across numerous hard discs, utilised by various team members, an efficient way of locating and utilising your media is essential.

PRODUCT DESCRIPTION

SessionBrowser™ marks a significant step forward for Pro Tools users in challenging post production environments. With powerful session management features for large projects and work groups, plus incredible session manipulation tools, SessionBrowser is an essential addition to any Pro Tools workstation.

FEATURES INCLUDE

- Drag 'n' drop browsing of session contents and dependent sound files
- Automatic 'Resolving' of broken file connections in sessions
- Identify missing files and their parent drives
- One click Archiving of Session and sound files

- Spot Regions from one session into another
- Identify mismatched sample rates in session files
- Fix or prevent other common session problems

USER COMMENT

• CHARLES MAYNES - CREATIVE CAFE LA
"SessionBrowser is the most useful Pro Tools utility I have ever used"

SESSION PROCESSING

SessionBrowser takes media management to a higher plane, by further allowing the user to manipulate a session. Features include:--

- Powertools for processing Pro Tools 4.x sessions.
- Session Sample Rate Convertor -this can turn a 48k Session into a 44.1k session and back again, processing all the necessary sound files and the session itself, plus volume, pan and mute automation.
- VariSpeed session function - this tool can convert sessions from 24-> 25 FPS, pull up and down sessions, correct sample rate mistakes, and offers user definable ratios to correct random sync problems where the session runs slightly too slow or too fast. In a world where audio material passes through so many different stages, rate problems are always a major dilemma.
- Display TDM Plug in usage for sessions.
- Facilities to manage file usage with multi-drive Pro Tools systems.
- Session Timestretch (in conjunction with Synchro Arts VocAlign) stretches each region, plus playlists and automation. Change the tempo of a music session, or the frame rate of a post session.
